BluePower Continuous Business

disaster recovery for dummies

- simple
- secure
- safe
- just peace of mind
- no upfront hardware, software or services costs

bluepower

disaster recovery for dummies

What Is Continous Business?

Your servers, the data and the users accessing them is what is important.

You could probably cope with having one server down for an hour or so, but what if:

- your mail server was down for a few hours
- several of your servers were down for a few hours
- one of your servers was down for half a day to a full day

Have you timed yourself attempting to recover a server, its operating system and restoring it from a tape?

Its slow, a very very slow process.

Even if you restore everything from a tape, its from the night before and you have lost all the changes made during the day.

You have always talked about a proper off-site DR plan, but you have never had the time or the budget.

But now, there is no excuse.

Its simple.

Its BLUEPOWER.

How It Works

We will duplicate your windows servers to our data centre.

Then we will continue to backup your data continuously throughout the day.

Should you have a failure of a server, or all servers, we can start the server in our datacentre, and continue processing from there.

We monitor your server, and can start your server automatically at your request.

When you have recovered the server in your office, we will help you recover the data to your old server.

Simple

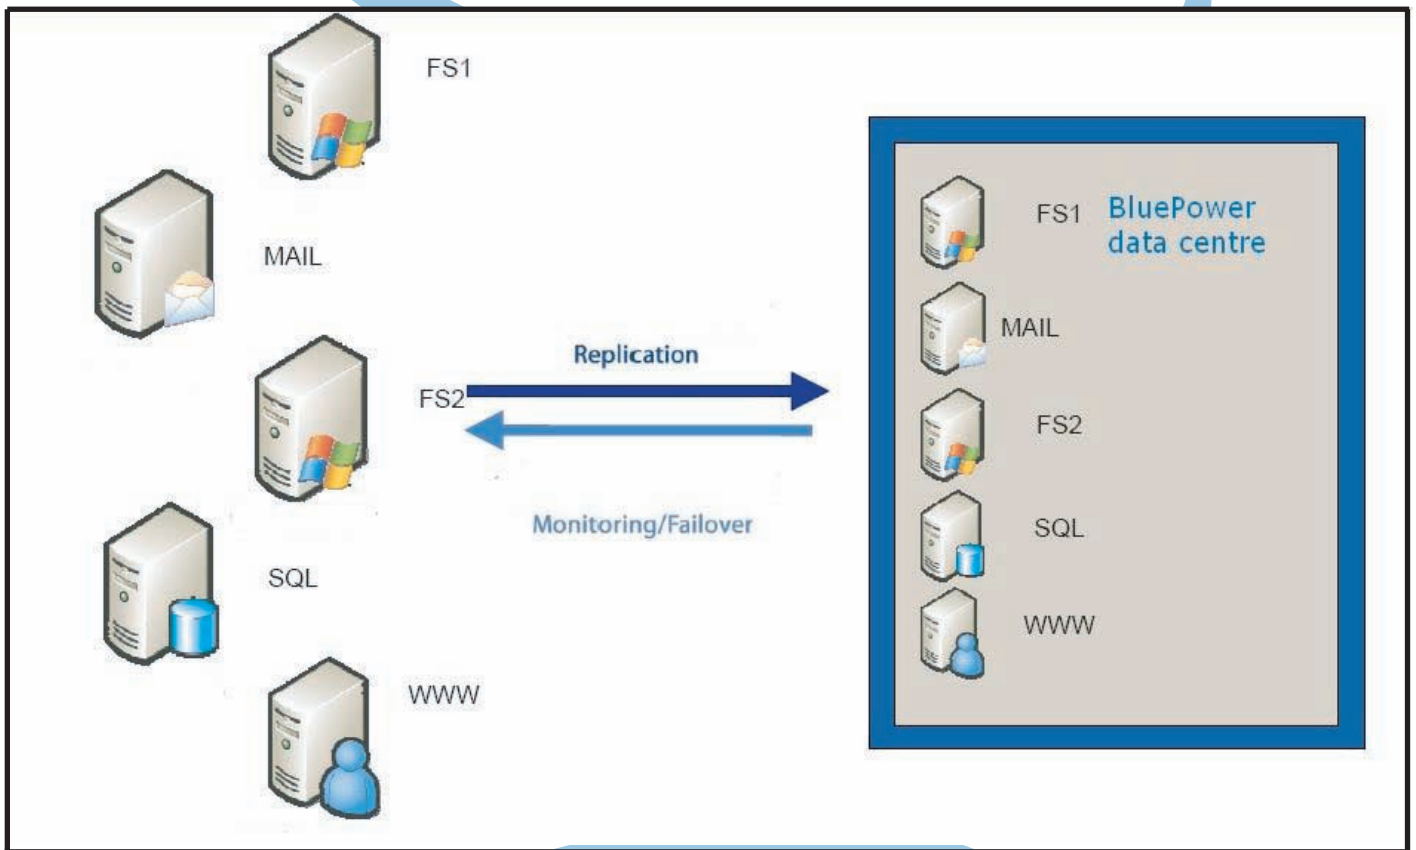

- We include all software, services and communications required.
- Just a simple monthly fee to pay.
- A recovered server uses the same settings and IPs as it would in your office.

Secure

- We use private high speed connections and not the internet.
- We use VLANs to secure your access to your servers in the datacentre.

Safe

- Ensures your business keeps running.
- It is physically seperate to your current server room.
- Our data centre is tier 1 - with physcial security, UPS, and air conditioning.

The Benefits Of Getting BluePowered Include:

Agility - we provide your business with an agile infrastructure that will enable you organise additional capability quickly and easily.

Accountability - we can help businesses reduce operational risk and comply with government and industry regulations.

Business Continuity- we can help you create improved information availability.

Flexibility - ability to increase or reduce services without locked in contracts.

Affordability - get high availability solutions for your applications without upfront costs.

Peace Of Mind - IT done well. With appropriate high availability means less support calls, and happier faces all round.
